WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS  
FOR CERTAIN RESPIRATORY DISEASES\*, VENEREAL DISEASES, & ALL CAUSES,  
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 113  
PAGE 2

RESTRICTED

RATE PER 1,000

\*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;  
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;  
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 26 Feb 1944

This ninth week of the year sees the rate for Admissions All Causes rise slightly but the curve is roughly following the seasonal trend experienced in 1943 and at a somewhat lower level. The respiratory disease curve rose very slightly this week but continues to lie well below the 1943 level for the corresponding week. The downward trend noted in the venereal disease curve last week was followed by an almost equal swing upward this week. Though the venereal disease rate has exceeded the 1943 rate for the corresponding week so far this year, at no week in 1944 has the rate reached the peak rate of 1943.

Influenza and Catarrhal Fever. Since the epidemic peak reached in the week ending Dec. 11, 1943, the incidence of these diseases has steadily decreased. The rate of decrease has, however, not been fast and though there has been a drop each week for 11 consecutive weeks the rate still stands close to 200. In contrast to this slow falling off from the peak was the rapid rise to the peak (a rise from 100 to 555) which took place between the week ending October 16, 1943 and the week ending December 11, 1943. The rate for this ninth week of the year is well below the rate for the corresponding weeks of 1942 and 1943. The highest rate is reported from the 9th District, the lowest from the 7th.

Pneumonia--Broncho and Lobar. The rate for these infections continues for another week at 5.0. This rate is slightly below the 1942 rate and slightly above the 1943 rate for the corresponding week of the year and contrasts favorably with the peak rate of 8.0 reached in the week ending December 11, 1943. The highest rate this week is reported in the 13th District. The rate for this infection in the Potomac and Severn River Commands has dropped from 17 for the week ending February 12 to 2.0 this past week. The 4th District reports none of these infections.

Pneumonia, Atypical. The incidence of this infection continues for the fourth consecutive week at 4.0, which is still well above the incidence reported for the corresponding week of 1943.

CURRENT TRENDS--CONTD.

The highest rate for the week is reported from the 11th District while the 4th, 6th, and 7th Districts report no cases of this infection. Though a rate of 20 in the 11th District is high, it represents an appreciable decrease from the peak rate of 26 reported from that District for the week ending December 11, 1943.

Rheumatic Fever, Acute. For another week the rate stands at 5.0 which is a comparatively high rate for this infection. The 13th District reports the highest rate, 14, while the 9th District ranks second with a rate of 10. The 4th District reports no rheumatic fever.

Scarlet Fever. A slight rise in the scarlet fever incidence was recorded for this ninth week of the year. Though the present rate of 15 is well below the peak rate of 21.5 reached in the week ending January 1, 1944 it is still considerably above the rate for the corresponding weeks of 1942 and 1943. For the first time this year the 9th District reported a higher rate for this infection than did the 13th District. It is of interest that the 9th District also reports the highest rate for tonsillitis and pharyngitis, acute.

Cerebrospinal Fever, Meningococcic. The curve for this infection for this ninth week of the year dropped to 0.5 a point considerably below that registered for the corresponding week of 1943. No cases were reported from the 4th, 6th, 7th, 13th Districts and the Potomac and Severn River Commands.

Malaria. The malaria rate again is 3.0, remaining well above the rate for the corresponding week of 1942 and 1943 but well below the August peak rate of 1943. The highest rate is reported for the 12th District, while no cases are reported in the 4th District.

Measles. For the third consecutive week the rate for measles continues at 18, following very closely the seasonal trend experienced in 1942 and 1943. This week the 9th District moves to first place as regards measles incidence and the 13th District drops to second place.
